

Powerhire Keeps AMPS in Business

AMPS is the Association of Manufacturers and suppliers of Power generating Systems, who are the trade association and industry voice for the UK's world-leading diesel and gas-engine power generating sector. At the end of May their Office Administrator was informed that the Estate where their office is located would be plunged into darkness for a day with the disconnection of the main power supply. Thus, when their Director General contacted us in the hope of a temporary generator to enable the business to remain 'up & running' whilst the planned maintenance was carried out ...how could we deny them?

Having previously been to site on several occasions as well as confirmation of all equipment requiring power, we recommended one of our small super silent 30kVA road towable temporary generators.

A few hours prior to the scheduled power outage Powerhire's Engineer arrived onsite, installed the temporary generator and cabling and set it running for the day. As soon as the power to the AMPS office was reconnected the next day Powerhire returned to site, disconnected the temporary generator and cabling following a successful days work all round!

"Please accept my sincerest thanks for the generous support of PowerHire and your team who helped keep us 'on the road' yesterday whilst the works were being carried out on the power cabling locally."
